

Bug Trend Analysis Using Atlassian MCP (Simulated Data)

This report uses a representative sample dataset because live Jira/Atlassian access was unavailable.

Key Findings

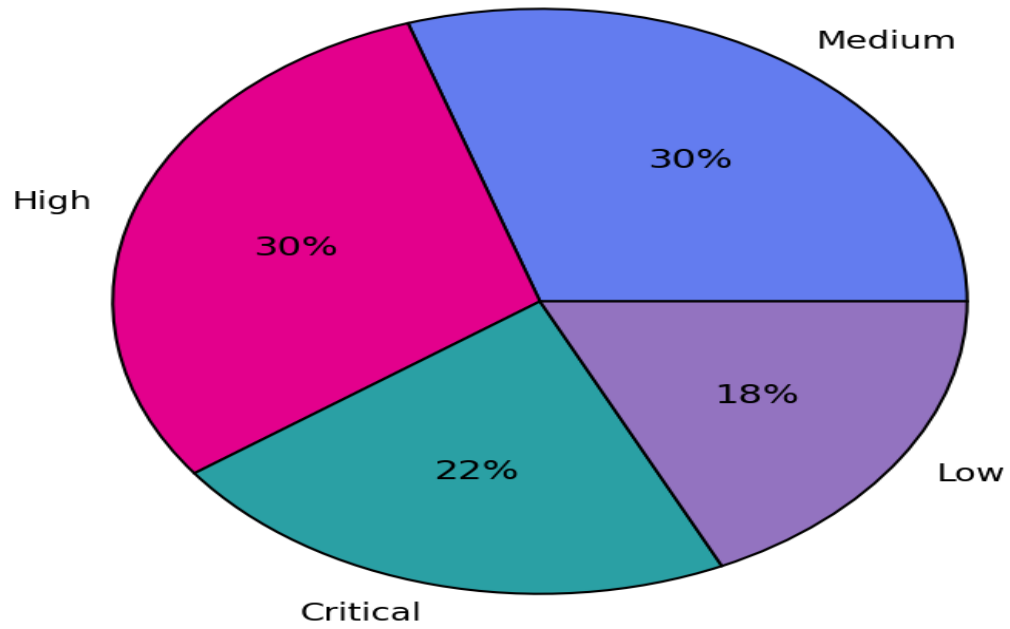

- 50 bugs analyzed
- Coding Defects were the largest root cause category
- Payment module had the highest defect count
- Most bugs were found during QA, Staging, and Production phases

Recommendations

- Strengthen code reviews
- Increase automated test coverage
- Improve requirement documentation
- Conduct architecture and design reviews
- Expand regression testing
